Microsoft Excel
---step_1---
1. Cleaned and organized all the data

2. Used Excel Formulae where necessary and prepared all the data for next steps (Python, PostgreSQL, Tableau).

3. Original Files are:
    ['us_commodity_exports_destinations_original.xlsx', 'us_commodity_exports_original.xlsx',
    'us_commodity_imports_original.xlsx', 'us_commodity_imports_sources_original.xlsx']

4. Files that I have cleaned and extracted are:
    ['analysis_multiple_sheets.xlsx', 'destinations_since_2019.xlsx', 'european_union.xlsx', 'sources_since_2019.xlsx',
    'us_agriculture_exports.xlsx', 'us_agriculture_exports_destinations.xlsx', 'us_agriculture_imports.xlsx',
    'us_agriculture_imports_sources.xlsx']

----
